

Seminar Track

Workflow Briefing

How to run a Seminar — from first tool survey to AI Audit

Lecturer: Dr. Lâm Quang Vũ · lqvu@fit.hcmus.edu.vn

Why this Seminar Track exists

Testing tools evolve faster than textbooks. The Seminar Track turns each team into the class expert on one modern testing tool — and trains everyone to evaluate AI-augmented alternatives critically rather than enthusiastically.

Self-directed

You choose the tool. We approve scope, not the verdict.

Hands-on

Demo runs on EShop. Slides are NOT the centrepiece.

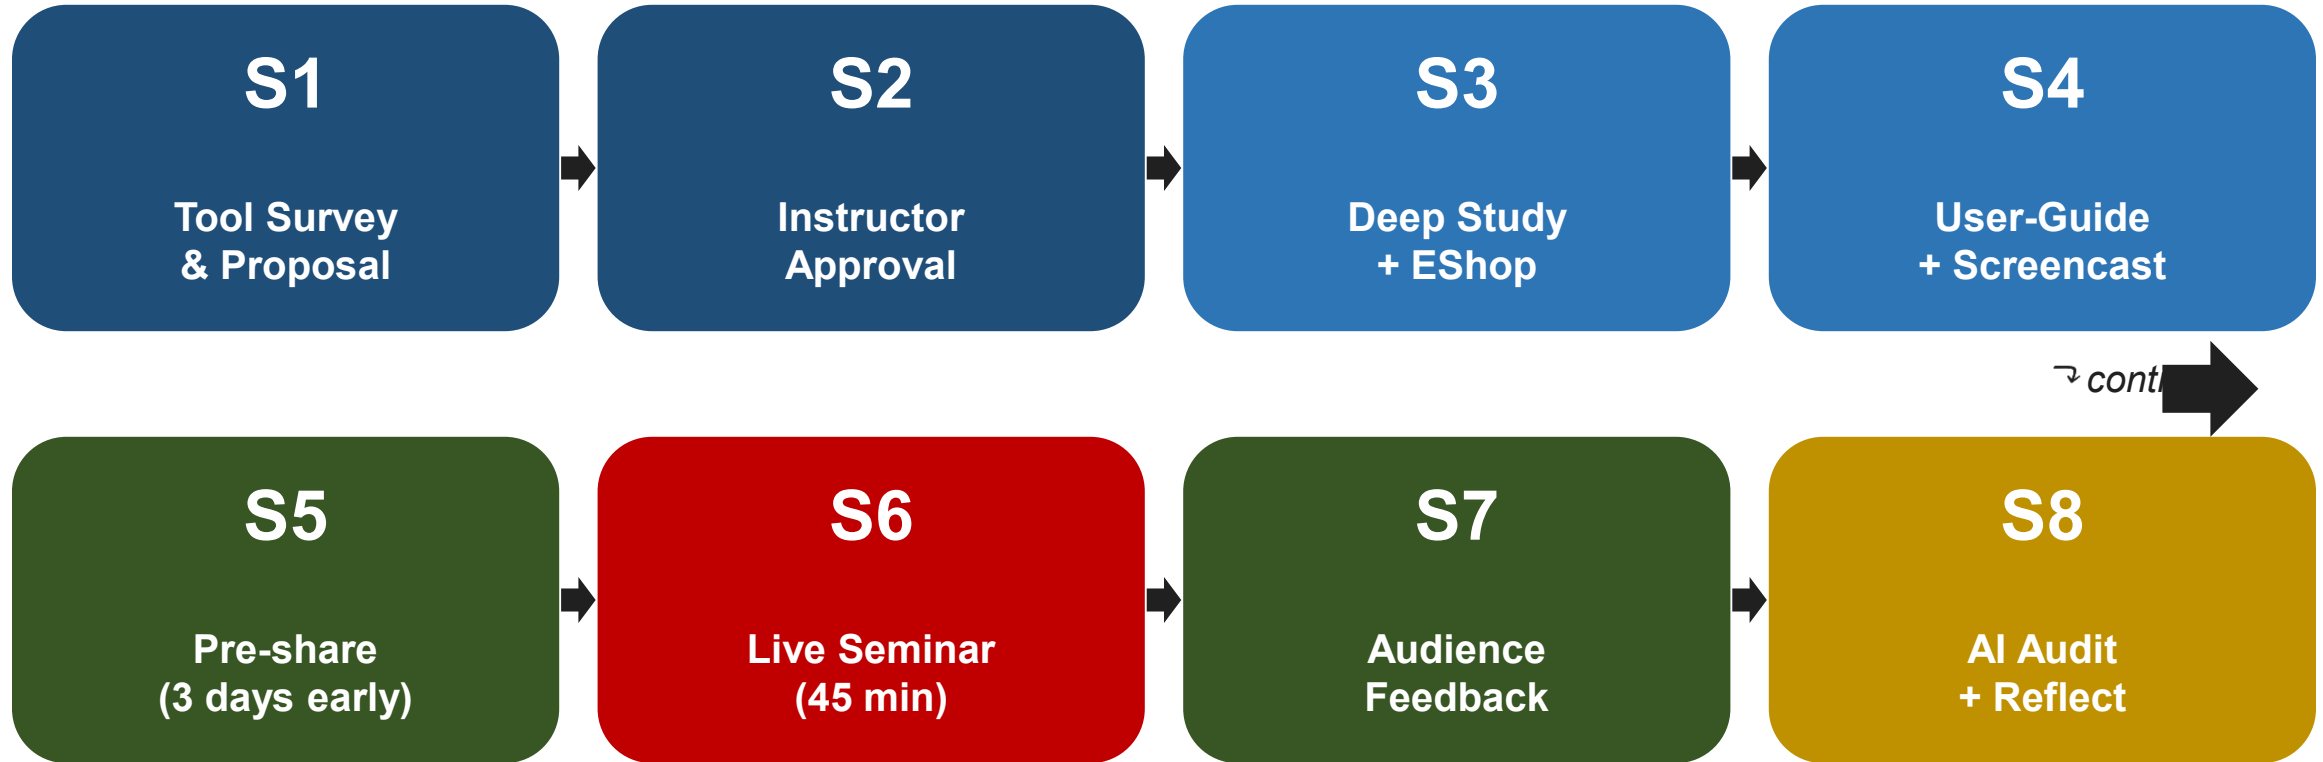

AI-augmented

Mandatory traditional + AI-tool pairing in every demo.

Peer-taught

You will run a 20-min activity for your classmates.

Workflow at a glance — 8 stages from claim to audit

Rule of pairing — every live demo must show one TRADITIONAL feature AND one AI feature.

Stage S1 — Tool survey & proposal (≤ 1 page, due W6 Sat)

What your proposal must contain

- Topic code + name (e.g., T6 API Testing)
- ≥ 3 candidate tools: 1 traditional, 1+ AI-augmented, 1 backup
- Comparison matrix — 5 criteria (cost, learning curve, EShop fit, AI ability, community)
- Pick + 3-bullet rationale
- AI Disclosure: which AI you used + what you cross-checked

Example excerpt — Team Alpha · T6 API Testing

Candidates Postman (traditional) · Karate (traditional, BDD) · Postbot AI (AI inside Postman)
Comparison Postman: free, GUI, weak BDD. Karate: free, Gherkin, harder onboarding. Postbot: free w/ acct, AI assertion suggestions.
Pick Postman + Postbot.
Reasons: (1) lowest onboarding cost, (2) EShop spec is small enough, (3) AI angle is visible end-to-end.
AI Disclosure Used Claude to draft the comparison; cross-checked Karate pricing on its own docs.

Stage S2 — Approval verdicts · Stage S3 — Deep study milestones

S2 — 3 possible verdicts (≤ 2 working days)

APPROVED

Proceed to S3 immediately. Lock the scope.

MINOR-CHANGE

Refine the proposal (≤ 24 h); proceed without re-review.

RECLAIM

Scope mismatch — pick a different angle / tool.

S3 — Deep study milestones (1–2 weeks)

M1 Install the tool; pass its official 'hello world'.

M2 Run one end-to-end scenario against EShop.

M3 Document 3 real failure modes you observed.

M4 Reproduce the same scenario with the AI variant.

M5 Capture metrics: setup time, run time, flake rate.

Pair-programming is encouraged — but every team member must be able to demo the tool unaided.

Stage S4 — User-Guide structure + Screencast specs

User_Guide.md — required Markdown sections

1. Introduction	Problem space + who the tool is for
2. Installation	Exact commands; OS notes; ≥ 1 screenshot
3. First Test	End-to-end on EShop in ≤ 15 steps
4. Advanced Usage	Configuration, plugins, parallel runs
5. Troubleshooting	≥ 3 real errors + the fix
6. Failure Modes (NEW)	≥ 3 ways the tool can mislead you
7. References	Docs, blog posts, papers — cite the source

Demo_Screencast.mp4 — specs

Duration	5–8 minutes (firm)
Resolution	1080p preferred · 720p minimum
Size	≤ 100 MB (split-zip if larger)
Language	English narration
Audio	No background music
Subtitles	Optional but recommended
Content	Real terminal/IDE — no pre-recorded fakes

Stage S5 — Pre-share · Stage S6 — Live seminar (45 min)

S5 — Pre-share rule

≥ 3 working days before your live seminar, push to Moodle:

- User_Guide.md
- Demo_Screencast.mp4
- Activity_Worksheet.md
- Seminar_Slides.pptx

Audience teams that don't skim the materials lose 1 attendance credit on the day.

S6 — 45-min live seminar breakdown

Pitch
10 min

Live demo
10 min

Audience activity
20 min

Q&A
5

Tips for the live seminar:

- Slides ≤ 15 — the activity is the centrepiece, not the slides.
- Demo on a real terminal/IDE; have a backup recording ready in case the network dies.
- Print the Activity_Worksheet for audience teams without a laptop.
- Assign roles within your team: 1 presenter, 1 demoer, 1 facilitator, 1 timekeeper.
- Hand out a 1-page cheat-sheet — your audience will thank you.

Stage S7 — Audience feedback · Stage S8 — AI Audit pack

S7 — Minute paper template (1 per team, end of session)

Seminar code · Date e.g., T6 · 2026-03-10

Team & members Team β · An, Bình, Châu, Dũng

(a) Most useful thing I learned *"Postbot can suggest assertions but it suggested an assertion on a non-existent field — humans must verify."*

(b) One thing still unclear *"When is Karate strictly better than Postman?"*

(c) Usefulness rating (1–5) 4 / 5

S8 — AI Audit pack (within 5 working days)

[AI-02]

AI Audit Report — 5 sections · ≥ 600 words

[AI-03]

AI Disclosure — signed PDF per member

[AI-04]

Reflective Statement — 300 words English

Templates live in:
[Homeworks/AI Templates/_En/](#)

Fill them in directly — do not paraphrase. Sign your real name.

AI Prompt Templates — copy, paste, adapt

Use these as starting points. Replace [BRACKETED] tokens and ALWAYS audit the output.

TEMPLATE 1 — Tool comparison matrix

I am preparing a seminar on [topic]. Build a comparison matrix for [Tool A], [Tool B], [Tool AI] on these 5 axes:
licence cost, learning curve, fit with [SUT name], AI capability, community size. Cite sources after each row. Flag any claim you are NOT 90% sure about.

TEMPLATE 2 — User guide draft (Failure Modes section)

Given this tool [tool name], list 5 plausible 'failure modes' – situations where the tool returns a wrong or misleading result. For each: (1) trigger, (2) symptom, (3) detection, (4) mitigation. Do not invent – only list modes documented in official docs, GH issues, or papers.

TEMPLATE 3 — Worksheet draft for audience activity

Design a 25-minute classroom activity that lets a team of 3–4 students try [feature] of [tool] on the EShop [scenario]. Output: Time-boxed steps, the worksheet, and an answer key. Activity must be feasible without internet access AFTER initial setup.

TEMPLATE 4 — Critical audit of an AI-generated artefact

Below is an AI-generated [test script / report / fix]. Audit it for: (a) factual errors, (b) missing edge cases, (c) silent assumptions, (d) over-confident statements. Output a numbered list with line references. Do not rewrite the artefact – only audit it.

Rubric snapshot · Common pitfalls to avoid

Rubric (Seminar = 20% of course)

Tool survey + proposal	10%
Depth of study	15%
User-guide document	20%
Live demo on EShop	15%
In-class hands-on activity	20%
Q&A + facilitation	10%
AI Audit + Disclosure + Reflect	10%

Top 6 pitfalls — auto-penalty

1. Copy-pasting AI output into the user guide unedited.
2. Demo'ing only the traditional tool OR only the AI tool — both required.
3. Skipping the 'Failure Modes' section in the user guide.
4. Pre-recording the 'live' demo (TAs check).
5. Activity worksheet that cannot finish in 25 min.
6. Missing AI Disclosure or empty [AI-02] sections.

Audience attendance — miss > 2 of the 10 live seminars and your team's seminar grade is capped at 70%.
