CS423 / CSC13003 – Software Testing (AI-augmented · 2026)

AI POLICY · TEMPLATES — 2026 v1.0

AI Use Disclosure Form — Seminar (Team Edition)

Attach to the Seminar deliverable, Topic T05 — Performance Testing. Consistent with the AI Audit Report ([AI-02]).

Adapted from Med Kharbach, PhD (2026) — AI Use Policy Templates for Higher Education. CC BY-NC-SA 4.0. This adaptation is prepared for FIT@HCMUS – CS423 / CSC15003 Software Testing course. The individual-assignment template has been adapted for a team seminar deliverable, per course guidance that Seminar Track work is disclosed at the team level.

1. Course & Team Info

Field	Value
Course:	CS423 / CSC13003 – Software Testing
Team:	Team 09
Assignment ID:	Seminar (S1–S8) — AI-03 Disclosure Form
Assignment Title:	T05 — Performance Testing (Seminar Report, User Guide, and supporting deliverables)
AI Use Category (1–5):	Category 5 — AI-Integrated Work
Date:	2026-07-15

Team Members

Student ID	Full Name
23127006	Trần Nguyễn Khải Luân
23127128	Nguyễn Thành Tiến
23127179	Nguyễn Bảo Duy
23127184	Lê Phạm Kiều Duyên

2. Disclosure Questions

1. AI tool(s) used:

Claude (used via Claude Code), ChatGPT, and Gemini.

2. Stage(s) of the assignment where AI was used:

Ticked at the team level, across the Seminar Report and User Guide:

- ☒ brainstorming
- ☒ outlining
- ☒ drafting
- ☒ feedback
- ☒ revision
- ☒ coding
- ☐ data analysis
- ☐ visual design
- ☐ other

AI was used to draft and restructure document sections, propose tool-comparison and workload-design options, and design test procedure and configuration steps for JMeter and k6 (e.g., authentication handling, workload staging). AI did not generate experimental measurements. The interpretation of experimental results was reviewed by the team before inclusion.

3. Main prompts or tasks given to the AI:

Representative AI requests are shown below.

1. Draft the seminar report structure from the approved project artifacts and course brief, marking any unmeasured result explicitly rather than estimating it.
 2. Explain the concurrency behavior of the database used by the system under test, and verify the explanation against the actual implementation before it is documented.
 3. Design the end-to-end test walkthrough for both tools, re-verifying the authentication mechanism against the real implementation before writing the steps.
-

4. Specific parts of the work AI contributed to:

AI contributed to drafting the Seminar Report's structure, tool-selection rationale, Live Demo script, and reference list, and to drafting User Guide sections covering the system introduction, the first end-to-end test walkthrough, advanced tool configuration, and failure-mode analysis. The team defined the SLO targets and testing scope per the seminar brief. The workload model was developed by the team with AI assistance during drafting and refinement; final decisions remained with the team. Experimental measurements came from actual tool execution, and AI-assisted interpretations were reviewed by the team before inclusion. Full attribution and verdicts per artifact are documented in [AI-02].

5. How the team reviewed, revised, or verified the AI output:

Every AI-drafted technical claim about the system under test (e.g., database concurrency behavior, the authentication mechanism, tool-specific configuration requirements) was checked against the project's actual implementation before inclusion. Tool-related and process claims were checked against official documentation and the T05 seminar brief. The Live Demo script was reviewed using an additional AI tool before the team finalized it. All AI output was read and revised by the team before being written into a deliverable; corrections made at each step are recorded in [AI-02].

3. Statement of Honesty

By signing below, each team member confirms that the disclosure above is accurate and complete for the team's Seminar deliverable. We understand that undisclosed or false disclosure of AI use is treated as academic misconduct and may result in a 0 grade for the assignment and disciplinary referral.
